

Repos

Core Bank

link: <https://gitlab.com/tbrain-ru/arivalbank/core-bank>

Primary service to opening accounts and processing payments. Has no public interface for security reasons. Uses RabbitMQ to communicate with other services.

Bank API

link: <https://gitlab.com/tbrain-ru/arivalbank/bank-api>

Provides HTTP API for web and mobile clients. Implements logic for all use cases. Communicates with Core Bank with RabbitMQ to open accounts and make payments.

BCA

link: <https://gitlab.com/tbrain-ru/arivalbank/backoffice-backend>

link (new implementation): <https://gitlab.com/tbrain-ru/arivalbank/backoffice-api>

Management bank interface for OPS team. Can read data from Core Bank DB and Bank API DB, but uses RabbitMQ to send update data commands.

WebHook

link: <https://gitlab.com/tbrain-ru/arivalbank/webhook-daddy>

Receives callbacks from different third-party services (Railsbank, Fireblocks, Rapyd) and sends it to Core Bank through RabbitMQ.

Fireblocks CoSigner Handler

link: <https://gitlab.com/tbrain-ru/arivalbank/fb-cosigner-handler>

Receives, checks and signs requests to Fireblocks.

Arival Base

link: <https://gitlab.com/tbrain-ru/arivalbank/arival-base>

Internal Gem. Implements base classes and useful modules for every project in Arival Bank.

AA Cipher

link: <https://gitlab.com/tbrain-ru/services/aa-cipher>

Internal Gem. Implements encryption data in DB.

FLR

link: <https://gitlab.com/tbrain-ru/arivalbank/flr-pdf>

link: <https://gitlab.com/tbrain-ru/arivalbank/flr-email>

NodeJS services. Generates PDF from templates and Emails. Communicate with Bank API through RabbitMQ.
